

PLANNING LIVE, SUSTAINABLE COMMUNITY ASSET MAPPING FOR A DEMENTIA E-FRIENDLY ALABAMA

NSF Project: 1951974

Nicole Ruggiano, University of Alabama

Award Type: PG, FY2020

Principal Research Investigators

- Nicole Ruggiano (PI), PhD, MSW
- University of Ala. School of Social Work
- Monica Anderson (co-PI), PhD
- University of Alabama College of Engineering
- Zhe Jiang (co-PI), PhD
- University of Alabama College of Engineering
- Jeff Gray (Co-I), PhD
- University of Alabama College of Engineering

Community Partners

- Commissioner Jean Brown, Alabama Department of Senior Services
- Ms. Miller Piggot, Alzheimer's of Central Alabama
- Ms. Carolyn Fortner, Middle Alabama Area Agency on Aging
- Dr. Daniel Potts, Neurologist
- Dr. Samory Pruitt, Vice President of Community Affairs at the University of Alabama
- Ms. Julie McGee, Association of Alabama Areas on Aging
- Mr. Hornsby Sams, Resident of City of Tuskegee

Project Overview

Current Project

PG Activities

Interviews with caregivers and providers

Caregiver Survey

Assessment of Available Data Sources

Conference with Experts

Community Advisory Board Meetings

PG Outcomes

Increased Capacity for Managing Complex VGI Data

Develop crowdsourcing protocols for dementia care.

Prototype for the IT interface and asset mapping design.

Project Vision: Future IRG

Web and mobile IT that supports asset mapping of dementia services and resources.

Database, algorithm, and interface for dementia care needs through VGI and data mining.

Advancing community engagement to promote ongoing crowdsourcing.

Project Overview

Use-Inspired Research

- Caregivers of people living with dementia (PLWD) in Alabama lack knowledge and access to services and resources that can support dementia caregiving and care.
- The vision and activities for this project was informed by prior community-based research with caregivers and providers as well as community partners in the targeted communities:
 - Birmingham, AL
 - Mobile, AL
 - Montgomery, AL
 - Tuscaloosa, AL

PG Activities

- Convened first Community Advisory Committee meeting. Follow-up interviews.
- Conducted interviews with providers of dementia-related services.
- Submitted conference abstract.
- Conduct interviews with caregivers of PLWD.
- Plan 1-Day virtual conference with VGI/crowdsourcing experts.
- Qualitative Data Analysis.
- Conduct statewide survey of caregivers and providers; Quantitative Data Analysis.
- Prototype Development.

Project Update

- **Provider and caregiver input informs the development of our proposed IT protocol.**
- **Community advisory board meetings are informing current and future IRG proposal.**
- **Initiating data analysis for survey and crowdsourcing protocol development.**
- **Conference plans will increase the team's capacity for managing complex VGI data.**

Goal: Improved Quality of Life

Project Evolution

What We've Learned:

- **We learned that caregivers of PLWD typically wait to access services until they are completely overwhelmed, which may have a negative impact on the quality of services they are able to access.**
- **The greatest service need among caregivers is in-home respite and support.**
- **Agencies vary in safety protocols and quality of training of in-home providers.**

How It's Impacting the Project:

How do we develop an IT that requires agencies to crowdsource their information while also facilitating trust and safety for the families that use the IT to access services?
